## Measuring Phase Shift with an Oscilloscope (26:53)

## ERROR at 17:23 separation of 1.4 divisions yields phase shift of $\mathbf{2 8 . 3 ^ { \circ }}$

Given the following information determine the electrical properties of these waveforms including the phase shift of CH 2 with respect to CH 1 :

CH1 YELLOW vertical sensitivity: 2V/div
CH2 BLUE vertical sensitivity: 2V/div horizontal sensitivity: $500 \mu \mathrm{~s} / \mathrm{div}$.

Discuss the consequences of increasing the vertical sensitivity of channel 1 and channel 2 to $500 \mathrm{mV} / \mathrm{div}$ and horizontal sensitivity 100us/div.

Given the following information determine the phase shift of CH 1 with respect to CH 2 :
CH1 YELLOW vertical sensitivity: 2V/div
CH2 BLUE vertical sensitivity: 2V/div
horizontal sensitivity: $2.5 \mathrm{~ms} / \mathrm{div}$.

Given the following information determine the phase shift of CH 1 with respect to CH 2 .
CH1 YELLOW vertical sensitivity: $100 \mathrm{mV} / \mathrm{div}$
CH2 BLUE vertical sensitivity: $100 \mathrm{mV} / \mathrm{div}$
horizontal sensitivity: $250 \mu \mathrm{~s} /$ div

Given the following information determine the phase shift of CH 1 with respect to CH 2 .
CH1 YELLOW vertical sensitivity: $500 \mathrm{mV} / \mathrm{div}$
CH2 BLUE vertical sensitivity: $500 \mathrm{mV} / \mathrm{div}$ horizontal sensitivity: $250 \mu \mathrm{~ms} /$ div

ERROR at 17:23 separation of $\underline{1.4}$ divisions yields phase shift of $\mathbf{2 8 . 3 ^ { \circ }}$

Given this phasor diagram determine how many divisions will separate $\mathbf{V}_{1}$ and $\mathbf{V}_{\mathbf{2}}$ when displayed on an oscilloscope with a horizontal sensitivity of $500 \mathrm{us} /$ div.

Identify how to enable and use time cursors to measure phase shift on the Tektronix 1032B.
Identify how to enable automated phase shift measurements on the Tektronix 1032B.
